Computer system slow?

Is your machine running slow?Â Â DoÂ pop-ups keep coming up on the page?Â Have you lost your internet connection?Â If so, your computer may be suffering from a virus /spyware infestation.Â There are other reasons too that can cause machines to run slow such as heat related problems or hardware issues.Â Also the older mechanical hard disk can be replaced with a modern Solid State Disk (SSD). These are much faster than their older counterparts. If your machine is running slow or you are concerned that you may have a virus, please contact us on 0121 733 7110.
